Windows 10 migration: At least it's not like last time

After learning lessons getting off Windows XP, enterprises should sail to 10

Is the memory of your last OS upgrade holding you back from deploying Windows 10? [Gregg Keizer](#) suggests the idea that the enormity of the process last time could be offputting for deployment today. *Rest assured, he and Gartner analyst Steve Kleynhans tell us, that you've already done the heavy lifting:*

"The migration-to-10 process will likely take significantly less time than the upgrade to Windows 7, but not only **because enterprises can reuse most of the same tools and policies**. Other factors that point to an easier-this-time OS bump, said Kleynhans, include improved application compatibility -- in theory, anyway -- because many organizations went through the work of recrafting internal apps or stepping up to more modern software, or services that replaced software, during the move from XP to Windows 7." *More sage wisdom and assurance [here](#) in the rest of Gregg's post from May 4, 2016 in CIO Magazine.*

Make Migrations Easy

Reusing what you already have in place is just one piece of the migration plan.

Bringing a migration and BDR tool such as [Tranxition Migration Manager](#) to the table enables you to take what you already have in place and streamline this for your Windows 10 deployment. Download 10 seats of TMM today and try out the product at no-cost or obligation, or apply those seats to your larger order. Contact [Jeff Anger](#) to discuss pricing options and get started on your OS migration today.
